Olszynki Park

RZESZOW, POLAND

Olszynki Park in Rzeszow, with its impressive tower reaching to a height of 220 meters, emerges as a new symbol of the city.

This tallest residential skyscraper in Poland surpasses even architectural icons like Złota 44 in Warsaw or Sky Tower in Wrocław. The complex also includes a commercial and service center along with a smaller tower standing at 78 meters. In total, the plan encompasses the creation of 292 luxury apartments of diverse standards. Designed by the S.T. Architekci studio, the project is based on a unique composition of cuboids with opposing arc shapes, resembling the structure of a two-masted ship. Olszynki Park marks the beginning of the city's expansion towards the opposite bank, contributing to the creation of a modern skyline.
